Sunnyvale, CA | 669-246-2233 | iyerswatip@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Professional Summary

Product manager, analyst with 2+ years shipping AI-driven products and conducting applied ML research. Built 4 production MVPs in under 12 months, each grounded in user interviews, data analysis, and sprint-level execution. Background spans NLP, computer vision, and network security research (Python, TensorFlow), with a track record of translating messy user problems into measurable product improvements.

Technical Skills

- **Product & Strategy:** Roadmapping, PRDs, OKRs/KPIs, RICE Prioritization, A/B Testing, User Research, Competitive Analysis, Stakeholder Management, Agile/Scrum
- **Research Methods:** Usability Testing, User Interviews (50+), Surveys, Qualitative & Quantitative Analysis
- **Languages:** Python, SQL, TypeScript, Java, C/C++, Go, JavaScript, HTML/CSS
- **Data & ML:** TensorFlow, NLP, Neural Networks, Computer Vision, NumPy, Pandas, Scikit-learn
- **BI & Analytics:** BigQuery, Looker Studio, Tableau, Power BI, Google Analytics, Google Sheets, Data Visualization, Data Modeling
- **Tools:** Jira, Confluence, Figma, Git, React, Angular, Acumatica, LaTeX

Education

University of California, Davis

Sep 2022 - Jun 2025

Bachelor of Science, Bachelor of Arts, Cognitive Science, Design, Computer Science

- **Coursework:** Tech Management, Algorithms, HCI, Cognitive Psychology, Logic & Probability, Software Design, Machine Learning

Experience

Digo

Jan 2026 - May 2026

Product Lead, Founding Team

Mountain View, CA

- Shipped a production AI event-management platform in 10 weeks from a blank codebase. 15 organizers running live events within the first month.
- Conducted 20+ user interviews, identified three onboarding drop-off steps, redesigned the flow in Figma, tested the new design, and reduced setup time by 50%
- Broke 12 epics into 40+ user stories using RICE scoring. Tighter scope and clearer acceptance criteria brought average cycle time down 30%.
- Write production TypeScript/Angular alongside engineering. Five consecutive sprints, zero missed releases.

Giri Inc.

Oct 2025 - Mar 2026

Product Consultant (Contract)

- Built the company's first analytics framework from scratch: defined 8 KPIs mapped to quarterly OKRs across activation, engagement, and conversion. The executive dashboard was live in 3 weeks.
- Reduced checkout steps from 7 to 3 by analyzing the full funnel with Google Analytics and BigQuery, delivering the largest conversion lift since launch (estimated 25%+ increase)
- Ran 15 user interviews and audited 5 competing platforms to build a prioritized roadmap. Shipped a 6-feature e-commerce MVP in 8 weeks, on schedule.

Opsfinity

Sep 2025 - Feb 2026

Product Consultant (Contract)

- Improved invoice-match accuracy from 72% to 94% by categorizing five recurring failure patterns in live Acumatica data and feeding corrections back into the matching algorithm
- Designed a cross-validation system that checks AP invoices against AR bills before approval, cutting manual review workload by roughly 40%.
- Set up weekly tracking for match accuracy, false-positive rate, and exception volume. Those numbers directly determine what the team fixes each sprint.

TechEquity AI

Feb 2026 - May 2026

Product & UX Design Contractor

- Ran 8 usability sessions for an AI summit platform serving 500+ attendees. Found 4 high-friction flows, redesigned each, and task-completion time dropped 35%.
- Translated research findings into detailed Figma specifications that incorporated accessibility requirements, and collaborated with developers throughout the build phase to ensure the shipped product matched the design, resulting in a smoother launch and fewer post-release fixes

UC Davis Dept of Computer Science

Jul 2023 - Mar 2026

Undergraduate Research Assistant (part-time), selected from 200+ applicants (UR2PHD Fellowship)

Davis, CA

- Co-author peer-reviewed research on AI-driven network security, performing model evaluation, failure analysis, and dataset preparation across multiple papers, resulting in several published articles
- Automated the full ML testing pipeline. Research turnaround dropped by half; the team now runs 3x more experiments per quarter.
- Built Python data pipelines to anonymize and process large-scale network traffic datasets that were previously too messy for ML experiments. That data now underpins the lab's intrusion-detection work.

Davis Design Interactive at University of California, Davis

Feb 2024 - Jun 2025

Finance Director

Davis, CA

- Managed a \$40K annual budget across 12+ events. Built a per-event cost model that caught overspend risks 2 weeks earlier than the prior process; adopted by 100+ student members. Peak attendance grew 60% YoY to 320+ participants, all under budget.

Projects

Pulse, NLP Analytics Copilot

Jan 2025 - Present

- PMs used to spend hours writing SQL to answer basic data questions. Built an NLP copilot (Python, TensorFlow) that takes plain-English queries and returns answers in under 30 seconds.
- Defined activation, engagement, query-trust, and retention metrics. Ran 3 A/B tests on ML-driven features; weekly active query volume went up 40%.

Margati, AI Productivity Tool

Sep 2025 - Nov 2025

- Shipped an ML system that auto-scores tasks by urgency and effort, cutting planning overhead by 35% for pilot users.
- Full cycle in 8 weeks: 15+ user interviews, RICE-prioritized roadmap, PRDs, Python model training, launch. Zero scope creep.

Record Keeper, Accessibility-First Redesign

Apr 2025

- Interviewed 23 users. Every single one flagged accessibility as the top problem. Focused the entire redesign there and hit a 4.2/5 satisfaction score from 40 pilot users.
- Post-launch analytics surfaced 3 drop-off points. Targeted fixes improved task-completion rate by 28% within two weeks.
